

## IUPAC Task Group on Atmospheric Chemical Kinetic Data Evaluation - Data Sheet of FOx102; VII.A5.21

Datasheets can be downloaded for personal use only and must not be retransmitted or disseminated either electronically or in hardcopy without explicit written permission.

The citation for the preferred values in this data sheet is: IUPAC Task Group on Atmospheric Chemical Kinetic Data Evaluation, <http://iupac.pole-ether.fr>.

This datasheet last evaluated: June 2015; last change in preferred values: June 2009.

### Rate coefficient data ( $k = k_1 + k_2$ )

$k/\text{cm}^3 \text{ molecule}^{-1} \text{ s}^{-1}$	$T/\text{K}$	Reference	Technique/ Comments
<i>Relative Rate Coefficients</i> $(1.98 \pm 0.24) \times 10^{-12}$	296	Chiappero et al. (2010)	RR (a)

### Comments

- (a) HO radicals were generated by the photolysis of  $\text{CH}_3\text{ONO}$  in  $n\text{-C}_6\text{F}_{13}\text{CH}_2\text{CHO}/\text{C}_2\text{H}_4/\text{CH}_3\text{ONO}$  mixtures in 700 Torr (933 mbar) of air diluent. The loss of  $\text{C}_6\text{F}_{13}\text{CH}_2\text{CHO}$  and  $\text{C}_2\text{H}_4$  were monitored using FTIR spectroscopy and a rate coefficient ratio of  $k(\text{HO}+\text{C}_6\text{F}_{13}\text{CH}_2\text{CHO})/k(\text{HO}+\text{C}_2\text{H}_4) = 0.25 \pm 0.03$  was obtained. Using  $k(\text{HO}+\text{C}_2\text{H}_4) = 7.9 \times 10^{-12}$  (Atkinson et al., 2006) gives  $k(\text{HO}+\text{C}_6\text{F}_{13}\text{CH}_2\text{CHO}) = (1.98 \pm 0.24) \times 10^{-12} \text{ cm}^3 \text{ molecule}^{-1} \text{ s}^{-1}$ .

### Preferred Values

Parameter	Value	$T/\text{K}$
$k / \text{cm}^3 \text{ molecule}^{-1} \text{ s}^{-1}$	$2.0 \times 10^{-12}$	298
<i>Reliability</i> $\Delta \log k$	0.15	298

### Comments on Preferred Values

The recommendation is based on the sole study of this reaction by Chiappero et al. (2010). The reaction is expected to proceed predominantly via abstraction of the aldehydic hydrogen giving  $\text{C}_6\text{F}_{13}\text{CH}_2\text{C}(\text{O})$  radicals.
